DETAILED ACTION

Response to Amendment

1. This in response to amendment filed 08/28/2007. No claims have been added. No claims have been canceled. No claims have been amended. Claims 1-19 are still pending in this application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Turner (US PAT # 6,738,373).

Regarding claim 1, Turner teaches a method of controlling the operation mode of a hybrid access terminal (HAT) (see col. 4, lines 44-65) capable of communicating a first communication system that supports voice service and low-speed data service and a second communication system that supports high-speed data service (see col. 2, lines 5, lines 1-9), the method comprising the steps of: monitoring both the first and second communication systems in a hybrid operation mode by the HAT (col. 2, lines 58-64); and transitioning from the hybrid operation mode to a data-only operation mode (col. 5, lines 4-16), upon receipt of a message ordering mode transition from the second communication system (the message reads on the PDSN data packets received from the base station, see col. 5, lines 25-32).

Turner does not specifically teach discontinuing monitoring the first communication system, and monitoring only the second communication system by the HAT.

However, Turner discloses that WCD can actually monitors only the first network channel (see col. 2, lines 57-63).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have the HAT monitoring the second communication system instead of the first communication system. This is strictly a design choice the Hat can be programmed to monitor any network desired and discontinue monitoring the

other network. Also, dropping the monitoring for the other communication network it would have been obvious in the Turner's system, since there is no need to exhaust the recourses when is not needed it.

Claims 10, 12-13 and 16-17 are rejected for the same reasons as discussed above with respect to claim 1.

For claims 2-3, 4-8, see col. 2, lines 37-63.

For claims 9, 11, 14-15 and 18-19, see col. 1, lines 14-54.

Response to Arguments

4. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
